

Mews Corporate Long-Stay Network

A 12-month bet on the brokerage Mews can build on top of itself

Tim Drisdelle · Prospective Director of Product & Engineering, Long Stays · June 2026

The moment

Why a 28+ night brokerage now, and not down the road

Sonder collapsed

November 2025. The master-lease model failed structurally. Corporate housing buyers lost their largest aggregator.

Chains racing

Marriott StudioRes, Hilton LivSmart, Hyatt Studios, Wyndham ECHO, Choice Everhome — all launched 2024-2025. Property-by-property B2B contracting. No broker.

Demand is here

Furnished Finder: 46M+ nights booked at 28+ days in 2025. The demand side is validated. Supply has no quality floor.

Customers building around us

Boost Society, Revisn, The Social Hub — long-stay-heavy Mews customers running custom engineering to plug PMS gaps.

The gap

The 28+ night corporate housing market has demand and supply.

There is no programmatic broker between them.

DEMAND

Corporate housing buyers

- Business travel
- Relocation
- Project workforce
- Healthcare placement
- Insurance ALE

No broker

SUPPLY

Hotel-PMS operators

- Extended-stay hotels
- Aparthotels
- Lifestyle hotels
- ~X,000 US Mews properties
- More daily

From \$183B potential to \$3B with discipline at every step

Mews Corporate Long-Stay Network addressable market funnel

\$3B Year-3 reachable. \$68B disciplined expansion runway. \$112B always excluded for structural reasons.

The bet

Instantiate Mews as the **corporate housing brokerage** for the 28+ night segment, on top of a **Resident Platform substrate** that closes long-stay PMS gaps for every existing Mews customer running long stays.

TIER 1 (universal): platform serves the existing book

TIER 2 (opt-in): Network adds incremental B2B corporate housing demand

Two tiers of customer benefit

Same architecture pattern as Stripe (Payments universal, Tax/Connect opt-in)

TIER 1 · UNIVERSAL

Resident Platform substrate

Every long-stay-operator Mews customer benefits, regardless of Network participation

- Resident as first-class object
- Lease as first-class primitive
- Cross-property resident identity (MMP)
- Jurisdiction-aware contracts
- Native recurring billing
- Boost/Revisn gap closures

TIER 2 · OPT-IN

Network brokerage

Properties opt in for incremental B2B corporate housing demand they can't easily reach today

- Inclusion as bookable inventory
- Corporate Booker channel access
- Network Membership Agreement (buyers)
- Network Participation Agreement (properties)
- Mediated three-way contracting
- Network take rate on bookings

Five product surfaces

Five web-based for 1.0. A Resident mobile app on roadmap.

1

Long-stay booking engine

B2C / direct, replaces standard Mews Booking Engine for long-stay properties

Tier 1

2

Corporate booker portal

B2B demand surface. The hero artifact.

Tier 2

3

Operator network view

Property-side. Network bookings inbox, NPA controls, revenue dashboard.

Tier 2

4

Mediated contract view

Mews internal. NMA + NPA + booking, audit trail, payment routing.

Tier 2

5

Resident web portal

How residents experience their stay. Mobile-first.

Tier 1 + 2

A façade, not a refactor

Resident Platform composes existing Mews primitives. No core PMS rewrite.

Product surfaces · Booker · Operator · Mediator · Resident

Mews Resident Platform

Resident · Lease · Buyer · NMA · NPA · Three-way contract · Jurisdictional layer

(New first-class objects + new commercial logic)

Mews Connector API

Reservations · Customers · Companies · CompanyContracts · BillingAutomations · PaymentPlans

Jurisdictional discipline is baked in

28+ night stays cross legal thresholds. Every market has its own rules.

United States

State-by-state residential tenancy law above 28-30 days. B2B corporate-let exempts from individual tenant protections.

State-specific contract templates × 50

France

Bail mobilité covers 1-10 month professional placements. Standard residential lease beyond.

Bail mobilité default; legal review above 10 months

Germany

Boardinghouse model up to 90 days. Mietvertrag (strong protections) beyond.

Boardinghouse template; legal review beyond 90 days

United Kingdom

RRA 2025 abolished ASTs. Corporate-let stays outside residential framework when buyer is a company.

Corporate-let default; flag for individual tenant

12-month roadmap

Substrate ships universally in Q2. Network ships to anchor segment in Q3.

Tier 1 substrate de-risks Tier 2 Network — customers happy on the platform before commercial commitment.

Commercial trajectory

Hybrid pricing: per-unit Tier 1 subscription + Tier 2 Network take rate + Mews Payments uplift

Year 3 stretch case: ~\$140M incremental ARR; central planning: ~\$80-100M. Planning numbers, not forecasts.

Validation runs in parallel, starts day 1

Four streams, each testing a load-bearing assumption

Customer interviews

15-20 long-stay-heavy Mews customers (Revisn, Boost, Social Hub, Habyt, Casa, Zoku, Fizz, Vesta, Lyf)

Quantifies workaround cost

Internal Mews data

% reservations ≥ 28 nights, extension rates, API call volume, NRR delta by long-stay cohort

Confirms market size

Field studies

One day on-site at Revisn (Raleigh) and Boost Society (France). Time-and-motion of long-stay workflows.

Highest signal per hour

Prospect interviews

Mint House (Nashville — locally accessible), Anyplace, Wanderjaunt, Niido. Why Stayntouch over Mews?

Confirms positioning gap

Go-to-market in four phases

Existing CSM org for supply. Healthcare staffing as anchor for demand.

Tier 1 to existing customers

Long-stay-heavy Mews customers adopt Resident Platform as add-on. No Network commitment. CSM-driven.

Q1-Q2

Network opt-in for supply

Lighthouse customers (Revisn, Boost) sign NPA first. CSM expands to 30-50 properties by end of Q2.

Q2

Buyer acquisition: healthcare staffing

Outbound to ~50 named agencies (Aya, Cross Country, Stanford). Anchor metros: Nashville, Dallas, Phoenix, Raleigh, Boston.

Q3

Public launch

Mews Unfold 2026. By then: 50+ Network properties, 10+ buyers, real GMV. Story is the credibility, not the announcement.

Q4

Why this over everything else Mews could build

The rare 12-month bet that compounds across three value streams

1

Defends existing book

Tier 1 universal platform value for every long-stay-heavy Mews customer. NRR protection.

2

Opens new market

Tier 2 Network brokerage instantiates Mews in a category no PMS owns today. Category-defining.

3

Foundation for future

Same architecture supports EU/APAC expansion, consumer-facing surfaces, AI-native demand matching.

No other 12-month bet hits all three simultaneously.

What 1.0 enables

Twelve months from now, Sarah at Stanford Healthcare opens a Mews-branded portal, searches Nashville for 6 travel nurses, 13 weeks. She sees Revisn, signs the booking, and pays a single invoice that covers all 6 nurses for the full 91-day stay.

Nurse Maria checks in via her resident portal. Two weeks in, her contract extends. She taps a button. Revisn's operator approves. The lease updates everywhere — quietly, because the platform underneath **treats residents as first-class**.

That's Mews Corporate Long-Stay Network 1.0.
